

IFLA UNIMARC Core Activity

Serials and Other Continuing Resources

UNIMARC Guidelines no.8

2006-10-19

1 Introduction

2 UNIMARC Model for Serials and Other Continuing Resources

3 Data Elements / UNIMARC Locations

4 Full Record Examples

1 INTRODUCTION

The following Guideline shows how the UNIMARC format is to be used when creating records for serials and other continuing resources. This Guideline was developed under the auspices of the IFLA UNIMARC Core Activity. It results from meetings of the IFLA Permanent UNIMARC Committee and the requirements of the ISBD(CR): International Standard Bibliographic Description for Serials and Other Continuing Resources. At these meetings data elements used to describe continuing resources were compiled and their location in UNIMARC was determined.

Section 2 of the Guideline indicates the model which gives several options for encoding UNIMARC records for continuing resources. Section 3 lists data elements commonly included in bibliographic descriptions of continuing resources and indicates where each data element would be placed in a UNIMARC record. Section 4 gives examples of full records for continuing resources.

This version of the Guideline takes account of the addition to the Record Label of a new code for integrating resource “i” in the Bibliographic level (character position 7), the addition of a new identifier of the field 210 and its definition as a repeatable field, and of the new codes in coded data fields, details of which were published in the UNIMARC Manual Update 5.

2 UNIMARC MODEL FOR SERIALS AND OTHER CONTINUING RESOURCES

The UNIMARC bibliographic format contains data elements for the specification, description and identification of continuing resources. Continuing resources are bibliographic resources that are issued over time with no predetermined conclusion and they include serials and ongoing integrating resources:

Definitions:

- Serial: a continuing resource issued in a succession of discrete issues or parts, usually bearing numbering, that has no predetermined conclusion. Examples include journals, magazines, electronic journals, continuing directories, annual reports, newspapers and monographic series.
- Ongoing integrating resource: a bibliographic resource that has no predetermined conclusion and is added to or changed by means of updates that do not remain discrete and are integrated into the whole. Examples include updating loose-leaves and updating Web sites.

For cataloguing purposes serials and ongoing integrating resources are treated differently.

Continuing resources show specific characteristics that have to be considered while creating a bibliographic record, i.e. they can be published in one or more media, in one or more languages, in one or more geographical editions, and so on. Moreover, practically every data element is subject to change. Some of these changes require a new description and others are included into notes with appropriate access points when considered important for users of the catalogue.

A. Continuing resources published in different media

Serials and integrating resources can be published in one or both of the following media:

- Print
- Nonprint (e.g., electronic resources, audiovisual, microform).

When the resource is available in one or more media, the bibliographic agency may choose either of three methods of description:

- Each different medium may be described in a separate bibliographic record. The records are linked using the linking fields. This method is recommended for use by national bibliographic agencies.
- Each different medium may be described in the same bibliographic record, with description of each media recorded in a separate field (i.e. physical description) or else grouped in a single field in the record.
- Only the resource in one medium is described.

B. Changes requiring a new description

- Major changes requiring a new description for serials: major change in title proper, change of the issuing body name when title proper is a generic term, change of edition statement, change of physical medium, when hitherto dependent title becomes independent, when a serial is cumulated and the contents of the cumulation are significantly different, when a serial is formed by the merger of two or more serials, when two or more serials are formed from the split of a serial (for more details see ISBD(CR), 0.12.1 – 0.12.2).
- Major changes requiring a new description for integrating resources: change of edition statement, change of physical medium, when a resource is formed by the merger of two or more resources, when two or more resources are formed from the split of a resource (for more details see ISBD(CR), 0.12.3).

C. Changes not requiring a new description

For changes not requiring a new description see ISBD(CR), 0.13.

1. Minor changes in title proper of serials

The changed title may be recorded in a note or in the appropriate 5-- field.

2. Any change in the description of the same integrating resources, except those listed in ISBD(CR) 0.12.3.

The changed title may be recorded in a note or in the appropriate 5-- field.

3. Change of place of publication and/or distribution, and/or name of publisher and/or distributor is recorded in the description accordingly:

- Serials
 - Change is given in a note (see ISBD(CR), 4.2.11.1)
 - Change is given in the publication, distribution etc. field with each place of publication and name of publisher recorded in a separate field or else grouped in a single field in the record.
- Integrating resources
 - The description is changed to reflect the latest iteration, and earlier place and/or name is given in a note (see ISBD(CR), 4.2.11.2)
 - Change is given in the publication, distribution etc. field with each place of publication and name of publisher recorded in a separate field or else grouped in a single field in the record.

The same procedures are followed for changes of the place of printing or manufacture (see ISBD(CR), 4.8).

4. Changes in the frequency statement

For serials changes may be recorded in a note. The data element in the coded field reflects the current information.

D. Continuing resources and their relations

Continuing resources may have relations to different resources either continuing or non-continuing. These relationships include different editions, continuations, mergers and splits, supplements, inserts and the like (for more details see ISBD(CR) 7.2.4.) The relationships can be described by either of the two following methods:

- Each resource may be described in a separate bibliographic record. These records are mutually linked using the linking fields. This method is recommended for use by national bibliographic agencies.
- Each resource may be described in the same bibliographic record, with description of each resource recorded in a separate field or else grouped in a single field in the record.

E. Combination of material and type of publication

When a continuing resource is a combination of material and type of publication, this information is recorded in repeatable material (or type of publication) specific area as follows:

- The subject content of the continuing resource is given first (e.g. scale information of cartographic materials, score and parts of printed music)

- Designation of resource for electronic resources is given second (e.g. designation of resource: electronic map data)
- Numbering information is given third.

For more information see ISBD(CR), Area 3. According to a particular case other ISBDs may need to be consulted.

F. Multi-part continuing resources

When a continuing resource is published in different individual parts, i.e., in the following cases:

- The description of physically separate units of a multi-volume (multi-part) issue of a serial.
- The description of physically separate units supplementary to, or accompanying, another publication.
- The description of a serial the title of which is made up of a common and a dependent title.
- The description of a serial with a chronological sequence of serials.

the bibliographic agency may choose either of the two methods of description:

Single level description:

- In the case of the description of the continuing resource as a whole, the title proper shows the title common to the parts, with the title of individual parts given in a contents note.
- In the case of the description of each individual part of the continuing resource
 - the title proper shows the title of each individual part, with the title common to the parts given in the series area, when the title of the part is significant,
 - *or*
 - the title proper is a combination of (a) the title common to the parts and (b) the title of each individual part, when the title of the part is not significant.

Multi-level description:

Multi-level description is based on the division of descriptive information into two or more levels. The first level contains information common to the whole or main publication. The second and subsequent levels contain information relating to the individual volume or other unit. The process is carried out for as many levels as are required to describe fully the publication and its parts.

At each level the elements of the description are given in the same order and with the same punctuation as for unitary publications. Some elements may be recorded at more than one level. When the title of a volume or a section or sub-series is preceded by a number or section/sub-series designation, the two statements are separated by a colon, space (:).

For more information see ISBD(CR), Appendix A and appropriate provisions.

As with other materials, cataloguing and bibliographic description of continuing resources is based on the item (i.e. the first issue or part or, lacking this, the earliest available issue or part for serials, and the current iteration for integrating resources except the dates of publication). For further information on sources of information see ISBD(CR), 0.5. The UNIMARC record for a continuing resource therefore does not differ in general from the structure of UNIMARC record for other materials. The data necessary for the bibliographic description should take into account different types and media of a continuing resource:

- Serials
- Ongoing integrating resources
- Printed resources
- Nonprint resources

3 DATA ELEMENTS AND UNIMARC LOCATIONS

Any applicable UNIMARC field or subfield may be used for the description of a continuing resource. The following data elements are frequently required to support access to and display of this type of material. In addition, any other data elements from UNIMARC may be used in a record for a continuing resource.

<i>Data Elements</i>	UNIMARC Location
Title proper and other title elements (e.g., general material designation for electronic resources, parallel title)	200
Intellectual responsibilities Editors and/or issuing bodies	200\$f \$g
Edition statement Any term, phrase or group of characters relating to: A) all copies of a continuing resource formally identified in the continuing resource as constituting a named and/or numbered edition; or B) all the copies of a continuing resource in a particular form of presentation having significant differences in intellectual or artistic content from other copies in the same form of presentation, whether or not the continuing resource bears any formal statement to this effect (e.g. 2 nd edition, new edition, standard edition).	205

Material (or type of publication) specific area	207, 230
Publication, distribution, etc.	210

Comment : This continuing resource, published on CD-ROM, is a cumulative collection of articles published in printed form in the serial "RTD civ." (or "Revue trimestrielle de droit civil" which was its former title) from January 1991. The CD-ROM is issued annually and each new issue incorporates the articles published the previous year into the collection.
