

GUIDELINES FOR USING UNIMARC FOR OLDER MONOGRAPHIC PUBLICATIONS (ANTIQUARIAN)

UNIMARC Guidelines no. 3

The following Guidelines illustrate how the UNIMARC format can be used when creating records for older monographic publications (antiquarian).

These Guidelines were developed under the auspices of the IFLA Universal Bibliographic Control and International MARC (UBCIM) Programme. They resulted from the meetings of the IFLA Permanent UNIMARC Committee and the requirements of the International Standard Bibliographic Description of Older Monographic Publications (Antiquarian). At these meetings data elements used to describe older monographic publications were compiled and their placement in UNIMARC was determined. In some cases, new fields or content designators, or redefinition of the existing field appeared to be required. The additions to UNIMARC recommended in these Guidelines were submitted to the UNIMARC maintenance process. **With the increasing use of UNIMARC for older monographic publications, requirements for additional data elements may be encountered. They should be brought to the attention of the IFLA UBCIM Programme Office.**

Older monographic publications are chiefly those produced prior to the introduction of machine printing in the nineteenth century and include those published for limited distribution or for sale on demand. Later publications produced by hand or by methods continuing the tradition of the hand-produced book may also be treated by the same standards (ISBD(A) definition). The use of these Guidelines, however, is not restricted to monographic publications only, but provides instruction for description of different types of publications that are produced during the hand press era.

To record antiquarian publications, it is necessary to establish standardized content designators that would encompass special characteristics of this type of publication. These characteristics, like the distinction between ideal copy and copy specific information as well as treatment of 'artificial' collections and multi-volume publications, have been specially considered in these Guidelines.

The first section of the Guidelines indicates the model for encoding UNIMARC records for older monographic publications in particular. Other types of publications may follow the same model with additional coding of their own material specific information. It describes the treatment of **(1) the ideal copy or perfect copy and imperfect copy, (2) 'Artificial' collections,** and **(3) Multi-volume publications.** The next section lists the **data elements** commonly included in bibliographic descriptions of antiquarian publications and indicates where these data elements would be placed in a UNIMARC record. The last section gives **full record examples.**

UNIMARC MODEL

Due to specific printing and distribution conditions of the hand press era (alterations during printing, special dedication copies, the presence of cancel leaves, etc.) and the historical conditions (manuscript notes on title page or margins, bound leaves and items, provenance notes like book-plates, author's and/or owner's autographs, etc.) that may not apply to all copies of the same edition, UNIMARC format offers models for recording these peculiarities.

(1) The ideal copy or perfect copy and imperfect copy

ISBD(A) is concerned with the description of perfect copies of library materials. In the situations where no ideal copy is available an imperfect copy is to be catalogued with the help of a bibliographic description for the complete example, if one can be found. The imperfections and other peculiar characteristics must be described in notes relating to the copy in hand. However, when no description of a complete copy can be found, the imperfect copy must be described according to the provisions of ISBD(A). In this latter case, there is no impact on UNIMARC tagging scheme.

Copy specific information is provided in the following note fields:

- 316 Note Relating to the Copy in Hand
- 317 Provenance Note
- 318 Action Note

Subfield \$5 Institution to Which the Field Applies is added to these fields to identify the institution processing the copy, and also the specific copy, if the institution has more than one. The following fields when present must also include subfield \$5:

- 012 Fingerprint Identifier
- 141 Coded Data Field: Antiquarian - Copy Specific Attributes
- 200 Title and Statement of Responsibility when this field is embedded in 481 and 482 linking fields
- 316 Note Relating to the Copy in Hand
- 317 Provenance Note
- 318 Action Note
- 481 Also Bound in this Volume
- 482 Bound With.

Additionally, the following fields may optionally include subfield \$5:

- 702 Personal Name - Secondary Intellectual Responsibility
- 712 Corporate Body Name - Secondary Intellectual Responsibility
- 722 Family Name - Secondary Intellectual Responsibility.

General coded data information on the ideal copy is recorded in

- 140 Coded Data Field: Antiquarian - General.

Example:

There are three copies of *Dictionarium ...* by Faust Vrancic in the National and University Library, Zagreb, formerly owned by well known Croats. The copy 'a' ('primj. a' in the example) is well preserved, while two others lack pages and need restoration.

(2) 'Artificial' collections

Due to various publishing, historical and personal conditions it is often the case that volumes in libraries' special collections contain items bound in the so-called 'artificial' or 'random' collection. Each item was originally printed/published separately and is thus considered a separate bibliographic item that must be described in a separate bibliographic record. The link between bibliographic items, i.e. records is recorded in fields

481 Also Bound in this Volume and
482 Bound With.

The record containing the description of the first item in the 'artificial' collection includes field 481 Also Bound in this Volume. This field contains a link from the first item to each item after the first in that collection. There can be as many repeated fields as there are other items bound to the first one. Records containing the description of the other items in the 'artificial' collection include field 482 Bound With. This field contains a link from each item after the first in an 'artificial' collection to the first item in that collection. It is repeatable only if the copies of the item described in the record are bound in more than one 'artificial' collection.

The 481/482 fields contain the 001 Record Identifier of the record containing full description of the item bound in the 'artificial' collection and bibliographic data of that item relevant to its identification. The choice of two options described below depends on the practice of the agency creating the record.

Note! The examples in this section have been intentionally simplified by the omission of many fields which would normally be found in the records. Only those fields which are needed to explain the recommended technique and the differences between the options are shown here.

Option 1:

Bibliographic data describing each item after the first in an 'artificial' collection is carried in field 316 Note Relating to the Copy in Hand in the record for the first item, beginning with the standard phrase: 'Also bound in this volume:' (or equivalent in other languages). Bibliographic data describing the first item is similarly carried in the 316 field in the record for each other item, beginning with the standard phrase 'Bound with:' (or equivalent).

481/482 linking fields contain embedded fields 001 Record Identifier pointing to the corresponding records and 200\$a Title Proper with \$5 Institution to Which the Field Applies for the identification of the institution which possesses a particular copy containing the bound item. The linking fields have Indicator 2 set to '0' to indicate that a note should not be generated from them. (The notes are in the 316 fields.)

Example:

There are two copies of *Missale Romanum Slavonico idiomate* in the National and University Library, Zagreb. Copy 'a' has two bound items *Ordo et canon missae* and *Appendix ad missale Romano-slavonicum*, while copy 'b' does not.

RIIA-4°-3 primj. a

Option 2:

The 481 linking field in the record for the first item in an 'artificial' collection contains embedded 001 Record Identifier and content designated data for each item after the first, and the 482 linking fields in the records for the later items have similar embedded 001 Record Identifier and content designated data pointing back to the first item. These linking fields have Indicator 2 set to '1' to indicate that Notes Relating to the Copy in Hand should be generated from them. These notes should begin with the standard phrases 'Also bound in this volume:' (for the first item) and 'Bound with' (for the other items) (or equivalents in other languages).

The following fields for recording data may optionally be included:

012 Fingerprint Identifier
140 Coded Data Field: Antiquarian - General
141 Coded Data Field: Antiquarian - Copy Specific Attributes
200 Title and Statement of Responsibility
205 Edition Statement
210 Publication, distribution etc.
215 Physical Description
3-- Notes Block
7-- Intellectual Responsibility Block

The field 200 Title and Statement of Responsibility should have subfield \$5 Institution to Which the Field Applies to indicate the institution which possesses a particular copy containing the bound item.

Example:

There are two copies of *Missale Romanum Slavonico* idiomate in the National and University Library, Zagreb. Copy 'a' has two bound items *Ordo et canon missae* and *Appendix ad missale Romano-slavonicum*, while copy 'b' does not.

(3) Multi-volume publications

Owing to different cataloguing practices and machine-readable formats multi-volume publications are catalogued either as one volume publication or as separate bibliographic items. In this latter case multi-level cataloguing with hierarchically linked records are often used. In the case of antiquarian publications multi-level cataloguing is recommended. In this way all peculiarities of the antiquarian publications that are copy specific can be recorded.

Example:

Clavis Scripturae S. ... by Matija Vlacic Ilirik catalogued in hierarchically linked multi-level records. It is a two volume publication issued in one physical volume.

Record 1:

Record Label: Hierarchical level code, ch. p. 8: 1

DATA ELEMENTS

The following data elements are needed to support access to and displays of the antiquarian publications.

ISBD(G) elements are given first in the left column since cataloguer will need to refer to several ISBDs when the item for description exhibits the characteristics described in other ISBDs, such as ISBD(NBM), ISBD(PM), ISBD(CM), ISBD(M) and ISBD(S). ISBD(A) elements, which follow, are given in the left column of the older monographic publications specification.

The UNIMARC content designation (tags, subfields, etc.) for each data element specified is given in the right column. In addition any other elements from UNIMARC may be used in a record or records for antiquarian materials.

Ex 4

Kongl. svenska theatren in 7 volumes described in multi-level records. The example shows the description of the first level and a description of vol. 1 in the second level record. The records do not contain a 141 field which is designated for recording copy specific attributes because they contain a description of the Swedish national bibliography items, i.e. ideal copies, and consequently, there is no copy specific information.
